Ved Patel

Full Stack Developer | AI & ML Engineer

+91 79900 33772 | patelved9026@gmail.com | Gandhinagar, Gujarat | Portfolio | GitHub | LinkedIn | LeetCode

SUMMARY

Final-year CS student (AI & ML) with internships at a national government institute and an AI startup. I build full-stack applications using — React, Node.js, MongoDB — and have hands-on experience with LangChain, and RAG pipelines. I work well in teams, own features from schema to front end, and am most interested in roles where applied AI and solid engineering overlap. Open to the right opportunity.

EDUCATION

B.Tech in Computer Science Engineering (AI & ML) *2022 – 2026*
Adani University, Ahmedabad | CGPA: **7.51**

Higher Secondary (Class XII) *2020 – 2022*
Sahajanand School of Achiever, Gandhinagar | **82%**

TECHNICAL SKILLS

Languages	JavaScript, Python, Java, C
Web / Backend	React.js, Node.js, Express.js, RESTful APIs, HTML5, CSS3
Databases	MongoDB, MySQL, Schema Design, CRUD Operations
Generative AI	OpenAI API, LLM Integration, Prompt Engineering, RAG, LangChain
Tools	Git, GitHub, VS Code, Power BI, Jupyter Notebook, JIRA, Agile

EXPERIENCE

Full Stack Developer Intern | *BISAG-N, Gandhinagar* *Jan 2026 – Present*

- Took a fully paper-based issue tracking process and turned it into a web app called **ITRA**. It now covers 5+ departments at a national government institute and has cut manual paperwork to zero.
- Designed **role-based access control (RBAC)** with three approval levels: Project Director, Department Admin, and Staff. Unauthorized access dropped to zero after go-live.
- Wrote **10+ REST API endpoints**, reworked the MongoDB schema so queries run ~30% faster, and added real-time sync so data stays current across sessions.

AI / ML Intern | *NXON* *Jun 2025 – Aug 2025*

- Trained and tested a **fall detection model** using pre-trained deep learning weights. Got it running on CPU with no GPU, which cut infrastructure costs, and accuracy stayed above **90%** on the test set.

PROJECTS

AI Interview Prep Platform | *MERN Stack, OpenAI API* *Sep – Oct 2025*

- Users pick a topic and get **10+ AI-generated Q&A pairs** back in seconds. Built with React, Node.js, Express, and MongoDB. Auth runs on **JWT** with role-based API access.

Wanderlust — Hotel Booking Platform | *MERN Stack* *May – Jun 2025*

- Property search, listings, and bookings in one app. Wrote the schema from scratch to avoid duplicate records, and the API handles concurrent bookings without data conflicts.

Habit Hub — Habit Tracker | *HTML, CSS, JavaScript, PHP* *Apr – May 2025*

- Simple tracker where users log daily habits across categories and see streaks over time. PHP backend stores all data so nothing resets on refresh.

Movie Recommendation System | *Python, Scikit-learn* *Dec 2024 – Jan 2025*

- Recommends movies using **cosine similarity** on a **5,000-movie dataset**. The feature pipeline is separate from the similarity logic, so swapping datasets takes minutes.

Election Result Analytics | *Power BI* *Feb – Mar 2025*

- Pulled multi-year election results, cleaned the data, and built **interactive Power BI dashboards** that show vote share and party trends at the constituency level.

CERTIFICATIONS

Full Stack Web Development — Udemy
Cloud Architecture — AWS
JIRA Project Management — Coursera
Deloitte Virtual Internship — Forage
Machine Learning Foundations — AWS
IEEE DAIICT Certification
Gemini Certified Student — Google
